Plastic changing to oil machine
(BP-2000N/5000N)
SHINKO TECNOS CO., LTD.

Our concept is simple, to return the plastic waste into what it originally was

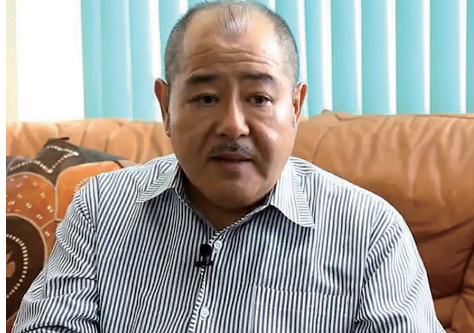

Usually dioxin is produced when oxygen exists in combustion of plastic waste.

This method increases the efficiency of oil production.

This method increases the efficiency of oil production.

to protect facilities and to control the properties of recovered oil.

Because plastic is a chemical product.

In response to Japan's Cabinets request, Shinko Technos Co., Ltd. is posted on Japanese cabinets platform as one of 37 companies 44 technologies.

Shinko Technos Co., Ltd.
